

LIVING IDENTITY® SOLUTION

Deterministic Identity Infrastructure Across 24 Emerging Markets

1.75B+ VERIFIED PROFILES | 95% ADULT POPULATION COVERAGE

Persistent Entities. Deterministic Resolution. Explainable Confidence.

Across fragmented and thin-file identity ecosystems, Living Identity® establishes deterministic entity continuity at national scale. Authoritative identity anchors are derived from governed, jurisdiction-aligned sources and operated within 1datapipe®'s compliance-infrastructure, with controlled refresh cycles and embedded provenance transparency.

The result: persistent, deterministic identity intelligence built on a global identity graph.

Each identity entity is maintained with structural confidence, recency awareness, and traceable lineage, enabling defensible identity decisions under regulatory scrutiny. Designed to preserve continuity over time, the platform establishes identity as durable infrastructure — not disconnected records.

Identity Data Delivery Architecture

Delivered as structured identity data or as a persistent, explainable identity graph.

The graph transforms static identity records into governed infrastructure that maintains persistent entity continuity and explicit relationships over time.

Decision-grade identity resolution requires structural confidence — not probabilistic matching.

GRAPH-NATIVE IDENTITY RESOLUTION

- Deterministic entity resolution
- Long-lived identity continuity
- Explicit, queryable identifier linkages
- Confidence, recency, provenance metadata

DECISION-GRADE IDENTITY OUTPUTS

- Persistent identity entities
- Confidence and consistency indicators
- Structured, explainable resolution outputs
- Audit-ready alignment
